In August 1998, CETI conducted a Level II site assessment to further investigate environmental concerns identified in the Level I assessment. Thirty three borings were drilled in the boiler UST area north of the building, one test pit adjacent to the factory building (the exact disposition is unknown), one temporary monitoring well, and three permanent monitoring wells were installed (MW3 through MW5). Selected soil samples were analyzed for DRO, ORO, chlorinated solvents, PCBs, total metals, volatile organic compounds (VOCs), and polycyclic aromatic hydrocarbons (PAHs). Visible free product was encountered in several borings (B1, B4, B5, B6, B10, B17, B19, and B22) and a lens of diesel/heating oil was identified between five and eight feet bgs. The concentration of DRO in B1, which was used as a temporary monitoring well, exceeded the MTCA Method A cleanup level at 41,500 µg/L. Additional analysis of the soil sample from B31 included EPH/VPH and PAH analysis, which confirmed diesel as the predominant hydrocarbon at the Site. B31 contained concentrations of DRO in excess of MTCA Method A cleanup levels, and cPAH concentrations in slight excess of the Method B cleanup levels for benzo[a]anthracene, chrysene, and benzo[a]pyrene.

The Site was entered into the Washington State Department of Ecology (Ecology) Voluntary Cleanup Program (VCP) in September 1998, with a request for opinion on a proposed remedial action. Ecology approved CETI's November 1998 Cleanup Action Plan (CAP), which utilized the remedial alternative of removing contaminated soil outside the building and using a pump and treat system inside the building,

with possible bioventing later on. Quarterly groundwater monitoring was approved for five years (monthly for the first six months).

Following the Level II site assessment, CETI excavated the diesel-contaminated soil from the parking lot and up to within several feet of the north and east walls of the building. A total of 2,804 tons of contaminated soil was transported offsite for disposal. Diesel-contaminated soil remained under the building, so an impermeable geomembrane was installed vertically between the contaminated soil in place near the building and the clean fill material. The pump and treat system outlined in the CAP was approved by Ecology and installed by CETI in 1999 to remove the remaining free-phase hydrocarbons from the Site. Six recovery wells were installed inside the building (RW1 through RW6) and two were installed outside, near the northeast corner of the building (RW7 and RW8). Approximately 100 gallons of free product were sequestered during the two years the pump and treat system was in operation. In April 2001, the system was shut off and the pumps were removed from recovery wells, due to the results of groundwater sampling and reduced amount of product recovery. Several years of groundwater monitoring was then conducted by Sound Environmental Strategies (SES), which effectively shows a stable groundwater plume which is laterally defined.

In September 2006, a prospective purchaser of the Property contracted a Phase I and II Environmental Site Assessment at the Site from Swift Creek Environmental (SCE). Piezometers were installed as part of the investigation to determine groundwater flow at the Site. SCE performed a limited subsurface investigation which included the collection of groundwater samples from existing monitoring wells (RW-2 and MW-4) on March 27, 2006, and groundwater and soil samples from recently installed temporary piezometers (MWA and MWB), boring B-3, and existing monitoring well MW-4. One soil sample was collected from B-3 (northwest of the former boiler), MWA, and MWB and analyzed for DRO, VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and Resource Conservation and Recovery Act (RCRA) metals, including arsenic, barium, cadmium, chromium, lead, mercury, silver, and selenium. Groundwater samples were collected and analyzed for DRO, VOCs, SVOCs, PCBs, and RCRA metals. SCE concluded metals concentrations were consistent with background levels in soil. No PCBs, SVOCs, or VOCs were detected in soil. The groundwater samples collected from MWA and MWB contained concentrations of DRO and ORO in excess of the MTCA Method A Cleanup Level.

Gasoline Service Station

As part of the Level I Site Assessment conducted by CETI in 1998, a geophysical survey was conducted by Apollo Geophysics in July 1998 in the area of the former service station. The geophysical survey identified three USTs: one 550-gallon, one 1,000-gallon, and one 2,000-gallon tank. The USTs were removed by Environmental Tank Services (ETS) under the direction of CETI in July 1998. Soil impacted with concentrations of diesel-, oil-, and gasoline- range organics (DRO, ORO, and GRO) below MTCA Method A cleanup levels was encountered in the fill material of the removed gas station USTs. Confirmation soil samples from the UST basin excavation indicated concentrations of all analytes below laboratory reporting limits (non-detect) and well below MTCA Method A cleanup levels.

In an effort to further characterize the release identified in the area of the former fueling station, Environmental Management Services (EMS) advanced four borings (B1 through B4) to twelve feet bgs in

the northwest corner of the Property. Soil and groundwater samples were collected and analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), GRO, DRO, and ORO. Selected samples were also analyzed for the presence of VOCs, PAHs, PCBs, and metals (arsenic, cadmium, chromium, lead, and mercury). GRO was detected at a concentration exceeding the MTCA Method A cleanup level in soil samples collected from boring B4. Groundwater collected from B4 also contained concentrations of DRO and ORO exceeding MTCA Method A cleanup levels. Groundwater collected from B1, B3, and B4 contained concentrations of lead in excess of the MTCA Method A Cleanup Level of 15 ug/L and the groundwater sample collected from B3 contained a concentrations of chromium exceeding the MTCA Method A cleanup level.

On June 15, 2007 Ecology provided an opinion on the completed remedial actions for the Site, which concluded that further characterization was necessary to adequately define the contamination associated with the former service station. Specifically:

- Petroleum hydrocarbon contamination in soil;
- Metals in soil;
- Petroleum hydrocarbons in groundwater;
- Volatile organic compounds in groundwater; and,
- Metals in groundwater.

Ecology suggested that groundwater monitoring wells should be installed in order to define the extent of this contamination. Ecology's opinion letter is attached to this proposal.

PROPOSED SCOPE OF WORK

Focused Subsurface Investigation

Included in this FSI will be the survey and identification of subsurface utilities, and the collection and analysis of soil and groundwater samples from multiple locations in the area of the former service station. ECI also proposes to collect groundwater samples from the existing well network originally installed to define the nature and extent of the DRO and ORO contamination. ECI will then compile the data acquired and complete a detailed report providing the FSI findings, opinions and recommendations.

Pre-Sampling Activities

- Public and Private utility location identification at the Site
- Preparation of Site-Specific Health and Safety Plan (HASP)

Limited Geophysical Survey

Prior to completing the sample collection portion of the project, ECI will complete a thorough non-invasive geophysical survey of the Site, using electromagnetic survey techniques. The intent of the limited geophysical survey is to locate and trace subsurface utilities and other buried equipment and "clear" each boring location.

Sample Collection

ECI will complete up to eight (8) borings using direct push sampling techniques as shown on the attached "Figure 3". Exact boring locations will be determined in the field by a qualified environmental professional based on geophysical survey data, utility locations and site observations. All drilling will be completed by a licensed driller as required in Washington Administrative Code (WAC) 173-160.

Soil will be field-screened utilizing olfactory techniques and physical observations such as soil staining and sheen presence prior to sample collection. Soil samples locations will be determined in the field by a qualified environmental professional. All soil samples will be collected in accordance with industry standard sampling techniques.

If groundwater is encountered, samples will be collected using industry standard techniques, including the use of low flow sampling equipment and disposable (single-use) polyethylene and silicon tubing.

Following collection, each discrete sample will be placed in new, laboratory provided containers and assigned unique sample identification numbers (e.g. B1-4'-022514). Volatile Organic Compounds (VOC) soil samples will be collected using the Washington State Department of Ecology (Ecology) -required Environmental Protection Agency (EPA) 5035 sampling collection method. Samples will then be placed into a container maintained at 4° Celsius until delivered to an on-site mobile laboratory.

Based on the results of the soil and groundwater samples, four of the eight soil borings will be completed as 1-inch diameter resource protection wells constructed of 5 feet of blank PVC casing, flush-threaded to approximately 10 feet of 0.010-inch slotted well screen. The depth of the slotted well screen section may vary and will be determined by a qualified environmental professional based on the observed soil groundwater interface.

ECI will collect groundwater samples from the newly installed wells in addition to those already installed on the Property. Based on the most recent groundwater sampling event conducted by SES, ECI understands there are 13 monitoring existing wells or recovery wells which can be accessed and sampled.

Groundwater samples will be collected in accordance with American Society of Testing and Materials (*ASTM) Guideline* D6771-02 "*Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations*".

ECI field staff will follow the procedures described below when collecting groundwater samples:

- The cap from the monitoring well will be removed and the groundwater level will be allowed to equilibrate to atmospheric pressure for a minimum of 20 minutes.
- The depth to groundwater in the monitoring well will be measured relative to the top of the well casing using an electronic water-level meter.
- Each monitoring well will be purged at a low-flow rate (100 to 300 milliliters per minute) using a peristaltic pump and dedicated polyethylene tubing. Temperature, and specific conductivity will be monitored during purging using a water quality meter to determine when these parameters stabilize.

Dissolved oxygen, oxidation-reduction potential, and pH will also be measured as they are important factors for the solubilization and mobilization of metals.

Regulatory Compliance

Regulatory compliance for this project is based on the WAC 173-340 –MTCA – Revised Code of Washington (RCW) Chapter 70.105D, implemented by Ecology. Pursuant to Chapter 70.105D RCW, Ecology has established cleanup standards and requirements for the cleanup actions (MTCA).

The rules establishing these standards and requirements were developed by Ecology in consultation with the Science Advisory Board (established under the Act) and with representatives from local government, citizen, environmental, and business groups. The rules were first published in February 1991, with amendments in January 1996, February 2001, and October 2007.

Contaminants of Concern & MTCA-A Cleanup Levels

Based on previous investigations and requirements outlined in Ecology's June 15, 2007 opinion letter, the contaminants of concern (COCs) at the Site are identified as: GRO; DRO; ORO; BTEX; select metals including arsenic, chromium, lead, and mercury; and VOCs.

The concentrations of these contaminants in the samples that will be collected for this FSI will be compared to the MTCA Method-A Soil CUL for Unrestricted Land Use and the Method-A Groundwater CUL, (MTCA WAC 173-340-900, Tables 740-1 (Soil) and 720-1 (Groundwater). These cleanup levels are presented below.

Table 1: Primary Contaminants of Concern

Method-A Cleanup Levels (MTCA-A) for Soil and Groundwater (MTCA Cleanup Regulation 173-340-900: Tables 720-1 and 740-1)		
Contaminant of Concern (COCs)	**Soil Cleanup Levels - mg/kg**	**Groundwater Cleanup Levels - µg/l**
Gasoline Range Organics (GRO)	100/30[1]	1,000/800[2]
Diesel Range Organics (DRO)	2,000	500
Oil Range Organics (ORO)	2,000	500
Benzene	0.03	5
Toluene	7	1,000
Ethylbenzene	6	700
Xylenes	9	1,000
Arsenic	20	5
Chromium VI	19	50
Chromium III	2,000	
Total Lead	250	15
Mercury	2	2
VOCs	Varies	Varies

[1] Gasoline Range Organics: Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture has a soil CUL = 100 mg/kg. All other gasoline mixtures have a soil CUL = 30 mg/kg. For groundwater, the CUL is 1,000 ug/l for gasoline mixtures without benzene and 800 ug/l for all other gasoline mixtures.

Sample Analysis

ECI expects up to 37 samples will be collected and analyzed during this primary investigation, 16 soil and 21 groundwater. Samples will be analyzed for site specific contaminants of concern outlined in Table 1. Should additional chemical analysis be warranted, ECI will provide recommendation and estimated costs for client authorization.

Analytical methodology will be consistent with Ecology and EPA criteria. All samples will be analyzed by a Washington State accredited laboratory.

Focused Subsurface Investigation Report

Following the receipt of sample analytical results ECI will prepare a focused subsurface investigation report, detailing site activities, sampling observations, and a summary of the laboratory analytical results.

Groundwater Monitoring Plan

Prior to the selection of an interim remedial action for the former gas station area, four consecutive quarters of groundwater samples will be collected from the 4 newly installed monitoring wells. Samples will be collected in accordance with American Society of Testing and Materials (*ASTM) Guideline* D6771-02 "*Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations*", along with the monitoring procedures described above.

Samples will be delivered to an Ecology accredited laboratory and analyzed for Site specific COCs discussed above. The proposed analytical methods are presented in the table below:

Contaminant of Concern	Analytical Method
Gasoline-range Organics (GRO)	NWTPH-Gx
Diesel-range Organics (DRO)	NWTHP-Dx
Oil-range Organics (ORO)	NWTPH-Dx
Benzene	EPA Test Method 8260C
Toluene	EPA Test Method 8260C
Ethylbenzene	EPA Test Method 8260C
Total Xylenes	EPA Test Method 8260C
Arsenic	EPA Test Method 7010 Series/6020/200.8
Chromium VI	SW846 7196A
Chromium III	EPA Test Method 7010 Series/6020/200.8
Total Lead	EPA Test Method 7010 Series/6020/200.8
Mercury	EPA Test Method 7010 Series/6020/200.8
VOCs	EPA Test Method 8260C

All chain-of-custody requirements will comply with industry standard operating procedures (SOPs) for sample handling. Sample documentation for custody purposes includes:

- Sample identification numbers,
- Sample labels,

- Custody seals,
- Chain-of-custody records,
- Field logbooks, and
- Analytical Records

The static depth to groundwater for the four monitoring wells will be measured each quarter prior to sampling to determine the groundwater elevation. The measured value will be subtracted from the elevation of the top of the monitoring well casings, which will be professionally surveyed after installation. Groundwater elevations will then be contoured and depicted on a figure with the relative flow direction and gradient.

ECI appreciates the opportunity to work with you on this project, should you have any questions please contact me directly at 805-680-4286.

Sincerely,

Brian A. Dixon
Vice President / Sr. Environmental Scientist

Mr. Dennis Kemp
Spring Air Northwest
c/o Mr. John R. Spencer,
Spencer Law Firm, LLC.
1326 Tacoma Ave. S., Suite 200
Tacoma, WA 98402

Re: Request for Information on Status of VCP Project for the following Site:

- **Site Name:** Spring Air Northwest
- **Site Address:** 725 E 25th St, Tacoma, WA 98421
- **Facility/Site No.:** 9111625
- **VCP Project No.:** SW0085

Dear Mr. Kemp:

The Department of Ecology (Ecology) appreciates your decision to clean up the Spring Air Northwest facility (Site) independently. However, our records indicate that you have not conducted any remedial actions during the past year at the Site. This letter requests information on the status of your cleanup and your continued interest in the Voluntary Cleanup Program (VCP).

Request for Information

Please submit the following information to Ecology within 30 days of the date of this letter:

1. Cleanup status report.

2. Any reports documenting the cleanup.

3. Plan and schedule for completing the cleanup.

Next Steps

Based on your response, Ecology will decide whether to continue providing you services under the VCP. We will notify you of our decision in writing. Please note that we will terminate the Agreement governing this Project if you do not respond to this request.

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of the Site. If you have any questions about this request, please contact me at 360-407-7263.

Sincerely,

Thomas Middleton
VCP Site Manager

CERTIFIED MAIL

June 15, 2007

Mr. Joe Carman
Spring Air NW
2626 Willamette Drive NE
Lacey, WA 98516

Re: Opinion under WAC 173-340-515(5) on Remedial Action(s) for the following Hazardous Waste Site:

- Name: Former Spring Air NW
- Address: 725 East 25th Street, Tacoma, Washington
- Facility/Site No.: 9111625
- VCP No.: SWO085

Dear Mr. Carman:

Thank you for submitting your site characterization report(s) for the Former Spring Air NW (Site) for review by the Washington State Department of Ecology (Ecology) under the Voluntary Cleanup Program (VCP). Ecology appreciates your initiative in pursuing this administrative option for cleaning up hazardous waste sites under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

This letter constitutes an advisory opinion regarding whether the remedial action performed is sufficient to meet the specific substantive requirements of MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing and addressing the following release(s) at the Site:

- Petroleum Hydrocarbons in Soil;
- Volatile Organic Compounds in Soil (suspected);
- Polychlorinated biphenyls in Soil (suspected);
- Metals in Soil;
- Petroleum Hydrocarbons in Groundwater;
- Volatile Organic Compounds in Groundwater (suspected);
- Metals in Groundwater.

Ecology is providing this advisory opinion under the specific authority of RCW 70.105D.030(1)(i) and WAC 173-340-515(5).

This opinion does not resolve a person's liability to the state under MTCA or protect a person from contribution claims by third parties for matters addressed by the opinion. The state does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). The opinion is advisory only and not binding on Ecology.

Ecology's Toxics Cleanup Program has reviewed the following information regarding your remedial action(s):

1. May 29, 2007, Environmental Management Services, LLC. Subsurface Investigation, 725 East 25th Street, Tacoma, Washington.

2. May 2, 2007, Sound Environmental Strategies. Groundwater Monitoring Report, First Semester of 2007, Former Spring Air NW Facility.

3. September 25, 2006, Swift Creek Environmental, Inc. Phase I & II Environmental Site Assessment, Han Jo Ro, LLC Property a.k.a. Spring Air NW Facility or Chami Design Inc. Property, 725 East 25th Street, Tacoma Washington 98421.

4. November 9, 2006, Sound Environmental Strategies. Groundwater Monitoring Report, Fourth Quarter of 2006, Former Spring Air NW Facility.

The reports listed above will be kept in the Central Files of the Southwest Regional Office of Ecology (SWRO) for review by appointment only. Appointments can be made by calling the SWRO resource contact, Debbie Nelson, at (360) 407-6365.

The Site is defined by the extent of contamination caused by the following release(s):

- Petroleum Hydrocarbons in Soil
- Volatile Organic Compounds in Soil
- Polychlorinated biphenyls in Soil
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

The Site is more particularly described in Enclosure A to this letter, which includes a detailed Site diagram. The description of the Site is based solely on the information contained in the documents listed above.

The groundwater monitoring for the Spring Air NW facility is being conducted according to an Ecology approved groundwater monitoring plan (May 18, 2006 Opinion Letter). Since the previous Opinion Letter (May 18, 2006), Ecology received the above referenced four reports. Two of these reports provide groundwater monitoring results for the Spring Air NW facility (southern portion of the site) and the other two reports primarily reported on investigation results for the northwest portion of the northern parcel. This parcel previously contained a gasoline service station.

Based on a review of the reports listed above, **Ecology has determined that the site characterization and remedial action associated with the former gasoline service station area <u>is</u> sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) in the northern portion of the Site:**

- Volatile Organic Compounds in Soil (except benzene, toluene, ethylbenzene, and total xylenes: BTEX)
- Polychlorinated biphenyls (PCBs) in Soil

However, based on a review of the reports listed above, **Ecology has determined that the site characterization remedial action associated with the former gasoline service station <u>is not</u> sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) at the northern portion of the Site:**

- Petroleum Hydrocarbons in Soil (including BTEX)
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

The extent of total petroleum hydrocarbons –gasoline range (TPH-G) soil contamination needs to be defined. Two samples from boring B4 (7.0 to 8.0 and 8.5 to 9.0 foot depth below ground surface, bgs) exceeded the total petroleum hydrocarbons –gasoline range (TPH-G) MTCA Method A Cleanup Level for Unrestricted Uses. Also, as stated in the previous Opinion Letter, because the site lies within the Tacoma Smelter Plume, there is the potential for arsenic and/or lead soil contamination. Exposed soil at the site should be sampled for arsenic and lead.

Additionally, groundwater monitoring wells should be installed in order to define the extent of contamination from total petroleum hydrocarbons – diesel range (TPH-D), total petroleum hydrocarbons – heavy oil range (TPH-O), chromium, arsenic, and lead. Grab samples of groundwater from borings SC-TL-MWA and SC-TL-MWB exceeded the MTCA Method A Cleanup Level for TPH-D and TPH-O and results from boring SC-TL-MWB exceeded the Cleanup Level for total chromium and arsenic. Results from B4 (west pump island area) were above MTCA Method A Cleanup Level for TPH-D and TPH-O. Results from boring B1, B3, and B4 exceeded the Cleanup Level for total lead and results from B3 slightly exceeded the Cleanup Level for total chromium.

The Former Spring Air NW site is located downgradient of the adjacent Tacoma Dome Station site. Therefore, it is possible that the observed groundwater contamination is migrating from the Tacoma Dome Station site. Because the constituents of concern for the Tacoma Dome Station site included volatile organic compounds (VOCs), **VOCs should also be included in the constituent list for the site.** When groundwater monitoring wells are installed, samples should be conducted on a quarterly basis. Groundwater flow direction and gradient should be determined for each sampling event.

Please provide Ecology with a site characterization and remediation work plan for these issues and areas of concern within three months of the date of this letter. The plan should include proposed groundwater monitoring well locations and monitoring depths, analytical constituents, and sampling schedule.

It is our understanding that the property will be redeveloped into a residential condominium complex. If the contaminated soil beneath the former Spring Air NW building will not be removed as part of the redevelopment, then an Environmental Covenant (EC) (formerly called a "Restrictive Covenant") should be filed on the property. The EC will prohibit withdrawal of groundwater from the property, and will require notification to Ecology of any future property sale or building renovation or demolition so that the contaminated soil beneath the building can be addressed. A boilerplate EC will soon be available from our website: http://www.ecy.wa.gov/programs/tcp/vcp/Vcpmain.htm. After Ecology has reviewed and approved the EC, it will need to be filed with Pierce County.

In accordance with WAC 173-340-840(5) and Ecology Toxics Cleanup Program Policy 840 (Data Submittal Requirements), data generated for Independent Remedial Actions shall be submitted in both a written and electronic format. Additional information regarding electronic format requirements, see the website http://www.ecy.wa.gov/eim. All laboratory analyses shall be performed by the State of Washington Certified Laboratory for each analytical method used.

Please note that this letter does not provide an opinion on the sufficiency of any other remedial actions conducted at the Site or whether further remedial action is necessary to characterize and address all contamination at the Site. To obtain such an opinion, you must

submit an independent remedial action report to Ecology upon completion of the cleanup action for the Site and request such an opinion under the VCP.

Please also note that this opinion is based solely on the information contained in the documents listed above. Therefore, if any of the information contained in those documents is materially false or misleading, then this opinion will automatically be rendered null and void.

The state, Ecology, and its officers and employees make no guarantees or assurances by providing this opinion, and no cause of action against the state, Ecology, its officers or employees may arise from any act or omission in providing this opinion.

Again, Ecology appreciates your initiative in conducting an independent remedial action and requesting technical consultation under the VCP. As the cleanup of the Site progresses, you may request additional consultative services under the VCP, including assistance in identifying applicable regulatory requirements and opinions regarding whether remedial actions proposed for or conducted at the Site meet those requirements.

If you have any questions regarding this opinion, please contact me at (360) 407-6247 or via e-mail at stee461@ecy.wa.gov.

Sincerely,

SS Teel

EXECUTIVE SUMMARY

Parametrix conducted a Phase I Environmental Site Assessment (ESA) for the Tacoma Dome Link Extension (TDLE) project in conformance with the scope and limitation of American Society of Testing and Materials (ASTM) Standard Practice E 1527-13 (2013) on the subject property identified as Tacoma Dome (TD) property TD 4437. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report.

The subject property is located at 725 E 25th Street in Tacoma, Washington on Pierce County Parcel Identification number 2075270010 (Figure 1). The subject property is currently owned by Amerco Real Estate Company and operated as a U-Haul rental facility. The subject property is developed with a large two- to three-story warehouse that contains the U-Haul rental offices on the southeast corner of the building. Monitoring wells and 55-gallon non-hazardous waste storage drums were observed on or surrounding the subject property, indicative of an ongoing investigation of historical releases. Monitoring wells and borehole patches were also observed on the adjacent property north.

The subject property was first developed industrially in 1891 and operated as a furniture manufacturing warehouse through the 1990s. The furniture manufacturing included oiling and varnishing of furniture. In 1960, a heating oil underground storage tank (UST) was installed on the property and operated until decommissioning in 1989. The neighboring property north operated as a gasoline station from 1939 through 1961.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the subject property, except for the following:

Recognized Environmental Conditions

The subject property is listed on the Washington State Department of Ecology (Ecology) Confirmed and Suspected Contaminated Sites List (CSCSL) database, Ecology UST database, Ecology Voluntary Cleanup Program (VCP) database, facility/site information (ALLSITES) database, and Resource Conservation and Recovery Act Non-Generator (RCRA NonGen) database. The listings are related to a historical petroleum release impacting soil and groundwater below the subject property. The petroleum release is from the historical heating oil UST, which leaked free product impacting soil and groundwater below the subject property and neighboring property to the north. Free product recovery was completed but residual groundwater contamination remains below the subject property. Vapor intrusion impacts related to the release are suspected. Therefore, interim cleanup actions have been performed on the subject property, and soil impacts to the neighboring property north have been addressed; however, the nature and extent of the release and cleanup have not been completed.

The adjacent property to the north has unresolved RECs related to a release from a historical gasoline station. Soil and groundwater impacts to the subject property are not suspected related to the neighboring site; however, due to the proximity to the subject property, there is potential for vapor migration to impact the subject property.

Data Gaps

An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

1. INTRODUCTION

Parametrix was retained by Sound Transit to perform a Phase I Environmental Site Assessment (ESA) for the Tacoma Dome Link Extension (TDLE) project on the subject property located at 725 E 25th Street in Tacoma, Washington (Figure 1). The property is identified as Tacoma Dome (TD) parcel TD 4437, which is located on Pierce County parcel number 2075270010. It is our understanding the subject property may be acquired by Sound Transit for the completion of the TDLE project. This Phase I ESA was conducted to support the environmental due diligence related to the potential acquisition.

The subject property is currently owned by the Amerco Real Estate Company and operated as a U-Haul rental warehouse. The subject property is located in a mixed-use area of commercial and industrial properties in the Tacoma Dome neighborhood of Tacoma in Pierce County, Washington (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term Recognized Environmental Conditions is defined in ASTM Standard E1527-13 as:

> "…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the environment; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*."

In accordance with ASTM Standard E1527-13, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

DRAFT: For internal discussion only. Not reviewed or approved on behalf of any party.

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those observed from the public right-of-way. No visual reconnaissance was possible inside the buildings on the subject property.

Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-13 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff
- Contacts and discussions with regulatory agencies and others
- Review of available hazardous substance or solid waste lists
- Opinions and judgments of Parametrix based on the information available

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 725 E 25th Street in Tacoma, Washington on Pierce County parcel identification number 2075270010. The subject property is located within the northeast quarter of the northeast quarter of Section 09, Township 20 North, Range 3 East in Pierce County, Washington (Figure 2) and legally defined as:

> *Lots 1 To 12, Block 7527; Tacoma Land Company First Addition To Tacoma, According To Plat Filed For Record On July 7, 1884, In The Office Of The County Of Pierce County Washington; Together With The Alley, Vacated By Ordinance No 19338 Of The City Of Tacoma Recorded May 3, 1971 Under Recording No. 2389669, In Pierce County, Washington.*

2.2 Site and Vicinity Characteristics

The subject property is currently owned by the Amerco Real Estate Company and operated as a U-Haul rental warehouse. The subject property is located in a mixed-use area of commercial and industrial properties in the Tacoma Dome neighborhood of Tacoma (Figure 2).

Neighboring properties consist of a parking lot and espresso stand (north), Tacoma Dome Station parking garage (west), Freighthouse Square (southwest), the Tacoma Link Operations and Maintenance Facility (south), and warehouses (east).

2.3 Physical Setting

The subject property is at an elevation of approximately 20 feet above mean sea level. The topography of the site gently slopes northeasterly towards the Puyallup River and Puyallup basin (USGS 2020). Soils in the area of the subject property are mapped as Alderwood gravelly sandy loam by the U.S. Department of Agriculture (USDA, 1955). These are described as moderately well drained. Made land is mapped just north of the Puyallup Avenue near the subject property. The made land is dredged material that was deposited artificially over marshy tideflats for grading.

The surface geology of the subject property is mapped as artificial fill deposits (Troost, in press). Quaternary Vashon recessional outwash ice contact deposits and Quaternary pre-Fraser age coarse-grained deposits are mapped adjacent south of the subject property. These are described as sand and gravel to silty sand and gravel with some clay portions. These deposits generally have a high porosity and permeability.

A review of well and borehole logs completed below the subject property and neighboring site north indicates the subsurface is primarily composed of silty sand with gravels down to 16 feet below ground surface. Water levels have been observed below the subject property and neighboring property between depths of 6 to 10 feet below ground surface. The groundwater gradient below the subject property is primarily northerly (Figure 2).

The nearest surface water body is the Thea Foss Waterway located 1,700 feet northwest of the subject property. The Puyallup River is located 3,800 feet northeast of the subject property.

2.4 Current Use of the Property

The subject property is developed with a warehouse and operated as a U-Haul facility.

2.5 Descriptions of Improvements on the Subject Property

The subject property is developed with a large wood-framed warehouse that encompasses over 76,000 square feet. The warehouse is a combination of several historical structures that were combined into their current configuration by 1970 (Pierce County Assessor 2020).

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products (ASTM 2013).

Parametrix reviewed the Pierce County Recorders database for liens against the current owner. No environmental liens were identified within the recorded documents filed for the current owner of the subject property. Parametrix also reviewed the Washington State Department of Ecology's environmental covenant database. No environmental (restrictive) covenants were filed for the subject property.

A Property History Guarantee title report was supplied by Sound Transit for the subject property (attached in Appendix A). There are no records in the title summary report indicating activity or use limitations or environmental liens affecting the property. No evidence of activity or use limitations or environmental liens against the subject property were identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Washington agencies and a compilation of historic uses of the site and site vicinity to determine whether past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR Radius Map Report (EDR report) is included in Appendix B.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviews with Tacoma-Pierce County Health Department personnel, observations during the site examination, or by additional detailed investigation of available records.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map Report (Appendix B). EDR reported a total of 244 properties with 378 listed conditions within a mile of the subject property. EDR also reported nine unmappable (orphan) sites in the area of the subject property. Parametrix reviewed the information in the EDR report to screen properties in the vicinity of the subject property for sites with potential to impact the subject property. The screening process involved reviewing the types of listings, types of contaminants, proximity and position relative to the subject property, topography, and groundwater gradient. Listings for sites found in the standard environmental records sources that could not be screened to verify potential impacts to the subject property were further evaluated by file reviews (see Section 4).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map Report regarding sites identified within the ASTM E1527-13 search radii from the databases listed below. Additional information regarding these sites was reviewed online on the Ecology website to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from Ecology include:

- Ecology Hazardous Site List (HSL)
- Ecology Confirmed and Suspected Contaminated Site List (CSCSL)

- Ecology CSCSL No Further Action (CSCSL NFA) List
- Ecology Solid Waste Facility/Landfill List
- Ecology Leaking Underground Storage Tank (LUST) List
- Ecology Underground Storage Tank (UST) List
- Ecology Aboveground Storage Tank (AST) List
- Ecology Institutional Controls (INST CONTROL) List
- Ecology Voluntary Cleanup Program (VCP) List
- Ecology Independent Cleanup Report (ICR) List
- Ecology and Pollution Liability Insurance Agency Petroleum Technical Assistance Program (PTAP) List
- Ecology Brownfields List
- Ecology Facility/Site Information System (ALLSITES) List
- Ecology Clandestine Drug Lab Contaminated Site (CDL) List and Historical CDL (HIST CDL) List
- Ecology Firefighting Foam Incidents (AQUEOUS FOAM) List and Perfluorinated Contamination Site Location (PFAS) List
- Ecology Reported Spills (SPILLS) List
- Ecology Drycleaners List

3.1.1.1 Ecology HSL, CSCSL, and CSCSL NFA Databases

The Ecology CSCSL database contains sites in Washington State that have been confirmed or have been suspected of contaminant releases and is the state equivalent to the federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS). The HSL is a subset of the CSCSL database for sites that have been formally ranked using the Washington Ranking Method. The CSCSL NFA database is former CSCSL sites that have achieved a No Further Action (NFA) determination from Ecology.

The subject property was found on the CSCSL databases:

- Spring Air Northwest/Carman Manufacturing Company at 725 E 25th Street is listed on the CSCSL database related to an ongoing release of petroleum hydrocarbons. This represents a REC to the subject property. Further information is provided in Section 4.

Eighty-five sites within one mile of the subject property were reported on the CSCSL database, thirty-eight sites within one mile were reported on the HSL database, and nineteen sites within 0.5 mile were reported on the CSCSL NFA database. Three CSCSL and four CSCSL NFA sites were reported within 0.125 mile from the subject property:

- The Former Texaco Service Station at 704 Puyallup Avenue (adjacent north of the subject property) is listed on the CSCSL. The listing indicates the adjacent property is impacted with petroleum hydrocarbons and metals above MTCA Method A cleanup levels. Based on the EDR

listings indicating a potential REC impacting the subject property, a file review was conducted and is further discussed in Section 4.

- Freighthouse Square at E 25th Street and East G Street (adjacent southwest across E 25th Street and East G Street) is listed on the CSCSL NFA database. Metals were reported above MTCA Method A cleanup levels and petroleum hydrocarbons were reported remediated below cleanup levels. The site has a No Further Action (NFA) status with Ecology related to institutional controls dating to 2003. Based on the NFA status, this site is not considered a REC to the subject property.
- The Freighthouse Square Amtrak Relocation at 602 E 25th Street (365 feet southwest of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons and polycyclic aromatic hydrocarbons (PAHs) were reported in soil and arsenic in groundwater above MTCA Method A cleanup levels. Cleanup has been initiated at the site. Based on the groundwater results for this property and limited migration reported, this site is not considered a REC to the subject property.
- The Tacoma Trestle Track & Signal Project (440 feet southeast of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels in soil and suspected in groundwater. Based on the EDR listings and proximity, this site is not considered a REC to the subject property.
- The Burlington Northern Railroad at 605 Puyallup Avenue (475 feet northwest) is listed on the CSCSL NFA database. Halogenated organics (chlorinated solvents) were suspected above MTCA Method A cleanup levels in soil. The site achieved a NFA status from Ecology in 1996. Based on the downgradient location and NFA status, this site is not considered a REC to the subject property.
- Western Beer Distributors at 712 E 26th Street (approximately 540 feet south of the subject property) is listed on the CSCSL NFA database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels in soil and pesticides were reported remediated below cleanup levels. The site achieved an NFA status from Ecology in 1996. Based on the NFA status, this site is not considered a REC to the subject property.
- Precision Pattern at 2620 East G Street (600 feet south of the subject property) is listed on the CSCSL NFA database. Petroleum hydrocarbons and non-halogenated solvents in groundwater were remediated below cleanup levels and the site achieved an NFA status from Ecology in 2009. Based on the NFA Status and proximity, this site is not considered a REC to the subject property.

3.1.1.2 Ecology LUST, UST, and AST Databases

The Ecology LUST Database List contains an inventory of reported leaking underground storage tank sites from commercial tanks.

The Ecology UST database contains registered commercial USTs. Residential heating oil USTs are not included in the Ecology UST database. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). Unless otherwise noted, the presence of USTs near the site does not, in itself, constitute a REC.

The Ecology AST database is a listing of aboveground storage tank locations regulated by the Department of Ecology's Spill Prevention, Preparedness and Response Program. Unless otherwise noted, the presence of ASTs near the site does not, in itself, constitute a REC.

The subject property is listed on the UST, LUST, and Recovered Government Archive LUST databases:

- Spring Air Northwest/Carman Manufacturing Company is on the UST database related to having one UST removed in 1996 and reported on the LUST database in 1998 and on the Recovered Government Archive LUST databases in 2011 and 2012. Based on the listings indicating a REC for the subject property, a file review was conducted and is further discussed in Section 4.

Fifteen sites were reported on the LUST database within 0.5 mile of the subject property, ten sites were reported on the UST database within 0.25 mile of the subject property, and no AST sites were reported within 0.25 mile of the subject property. Two of these sites (three listings) were reported within 0.125 mile from the subject property:

- Western Beer Distributors at 712 E 26th Street (540 feet south of the subject property) is listed on the UST and LUST databases. As noted above, this site is also listed on the CSCSL NFA database related to the release from the USTs. The site achieved an NFA status from Ecology in 1996. Based on the NFA status, this site is not considered a REC to the subject property.
- Superior Cartage of Washington Inc at 805 Puyallup Avenue (465 feet northeast of the subject property) is listed on the UST database. The site has two reported USTs that have been previously removed. Based on the lack of additional listings and position downgradient of the subject property, this site is not considered a REC to the subject property.

The remaining listed sites on the UST and LUST databases identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 Ecology VCP, PTAP, ICR, INST CONTROL, and Brownfields Databases

The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the Ecology voluntary cleanup program and are undergoing cleanup. The Petroleum Technical Assistance Program (PTAP) database is a list of petroleum release sites that have been entered into the Pollution Liability Insurance Agency PTAP program and are undergoing cleanup. The independent cleanup report (ICR) database is a subset of the VCP or former VCP sites that have reported interim cleanup actions to Ecology. The institutional control (INST CONTROL) database is a subset of properties with confirmed releases where institutional controls are in place to manage the remaining contamination. The Ecology Brownfields database is a list of abandoned, idle, or underused commercial or industrial properties where redevelopment is limited due to the real or perceived contamination on those properties.

The subject property was reported on the VCP database.

- Spring Air Northwest is listed as entering Ecology's VCP in 1998 related to a release of petroleum hydrocarbons. As noted above, based on the listings for the subject property, a file review was conducted and summarized in Section 4.

Seventeen sites within 0.5 mile of the subject property were reported on the VCP database. Two of these sites were reported within 0.125 mile from the subject property:

- Former Texaco Service Station at 704 Puyallup Avenue (adjacent north of the subject property) is listed on the VCP database. As noted above, listings for the adjacent property are related to petroleum hydrocarbons and metals in soil and groundwater. Based on the listings, an additional file review was conducted and summarized in Section 4.
- Precisions Pattern Inc at 2620 East G Street (approximately 600 feet south of the subject property) is listed on the VCP database. Petroleum hydrocarbons and non-halogenated solvents in groundwater were remediated below cleanup levels and the site achieved an NFA status from Ecology in 2009. Based on the NFA status and proximity, this site is not considered a REC to the subject property.

The remaining listed sites on the VCP database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

One site within 0.5 mile of the subject property was reported on the PTAP database. The site is over 2,200 feet east of the subject property with no potential to impact the subject property.

Ten sites within 0.5 mile of the subject property were reported on the ICR database. None are within 0.125 mile from the subject property. The listed sites on the ICR database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

Seven sites within 0.5 mile of the subject property were reported on the INST CONTROL database. One site was reported within 0.125 mile from the subject property:

- Freighthouse Square at E 25th Street and East G Street (adjacent southwest across E 25th Street and East G Street) is listed on the INST CONTROL database. As noted above, this site is also on the CSCSL database related to metals reported above MTCA Method A cleanup levels and petroleum hydrocarbons were reported remediated below cleanup levels. The site has a No Further Action (NFA) status with Ecology related to institutional controls dating to 2003. Based on the NFA status and institutional controls, this site is not considered a REC to the subject property.

The remaining listed sites on the INST CONTROL database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

One site within 0.5 mile of the subject property were reported on the Brownfields database:

- American Plating at 2110 East D Street (1,645 feet northwest of the subject property) is listed on the Brownfields database. The listing indicates this site is on several additional databases and has a NFA status from Ecology dating to 2015. Based on the distance relative to the subject property and the reported status, this site is not considered a REC to the subject property.

3.1.1.4 Ecology ALLSITES Database

The Ecology ALLSITES database summarizes sites that likely handle or store hazardous waste in association with the facility/site information system.

The subject property is listed on the ALLSITES database:

- Spring Air Northwest/Carman Manufacturing Company at the subject property address is listed on the ALLSITES database. Further discussion on listings for the subject property is presented in Section 4.

One hundred and twenty-nine sites within 0.5 mile of the subject property are reported on the ALLSITES database. Fifteen sites were reported within 0.125 mile of the subject property. Five were identified adjacent to the subject property:

- The Former Texaco Service Station at 702 Puyallup Avenue (adjacent north) is listed on the ALLSITES database. Further discussion of the adjacent property south is presented in Section 4.
- Puget Sound Specialty at 706 E 25th Street (adjacent south across E 25th Street) is listed on the ALLSITES database. This listing appears related to asbestos reported during a building demolition. Based on the listing, it is not considered a REC to the subject property.
- The Pierce County Transit Tacoma Dome site located at 609 E 25th Street (adjacent west across East G Street) is listed on the ALLSITES database. This listing appears related to waste generated or removed from the adjacent property in the 1990s prior to its redevelopment into the current parking garage. Based on the lack of additional listings, this site is not considered a REC to the subject property.
- Freighthouse Square at E 25th Street and East G Street (adjacent 75 feet southwest across E 25th Street and East G Street) is listed on the ALLSITES database. As noted above, this site has a NFA status with Ecology related to institutional controls dating to 2003. Based on the NFA status, this site is not considered a REC to the subject property.
- Sound Transit Tacoma Link Operations Facility at 802 E 25th Street (adjacent southeast across E 25th Street) is listed on the ALLSITES database. The listing appears related to a variety of chemicals used in the repairs and maintenance of the Tacoma Link light rail system. Some violations were reported for this site. However, based on the non-generator status, the listing is not considered a REC to the subject property.

3.1.1.5 Ecology CDL and HIST CDL Database

There were no CDL or HIST CDL sites reported within 0.125 mile of the subject property.

3.1.1.6 Ecology AQUEOUS FOAM, PFAS, and SPILLS Databases

The Ecology AQUEOUS FOAM, PFAS, and SPILLS databases report potential small releases to the subsurface that have the potential to cause contamination. No AQUEOUS FOAM or PFAS sites were reported within 0.5 mile of the subject property. No SPILLS sites were reported within 0.125 mile of the subject property.

3.1.1.7 Ecology Drycleaner Database

The drycleaner database is a listing of former or current drycleaners in Washington. No drycleaners were reported within 0.25 mile of the subject property. No inactive drycleaners were reported within 0.25 mile of the subject property.

3.1.2 EPA Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM 1527-13 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Act (RCRA)
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List
- Manufactured Gas Plant Sites

3.1.2.1 National Priorities List

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. EDR reports no NPL sites were identified within one mile of the subject property; however, there are two related NPL sites that are near the subject property with one potentially impacting the subject property:

- The Commencement Bay Nearshore Tideflats NPL site (EPA 2020) includes multiple properties within one mile north of the subject property. The site encompasses an active commercial seaport and includes 12 square miles of shallow water, shoreline, and adjacent land due to widespread contamination in water, sediments, and uplands areas. The site was placed on the NPL list in 1983 and is undergoing its fifth five-year review. This NPL site is not known to have impacted the subject property and is not considered a REC for the subject property.
- The Asarco Tacoma Smelter Plume NPL site is a part of the Commencement Bay Nearshore Tideflats NPL site and includes large portions of Pierce, King, Kitsap, and Thurston Counties related to windblown contamination of arsenic and lead deposited from operation of the Asarco Smelter in Ruston, Washington, for a period of nearly 100 years (Ecology 2020c). The area of the subject property is mapped within an area of impact from arsenic of less than 20 parts per million. Based on the mapped concentrations, this represents *de minimis* conditions at concentrations less than MTCA Method A cleanup levels and is not considered a REC to the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained

in the EDR report indicates the subject property is not listed as a SEMS site. Three SEMS sites were identified within one mile of the subject property:

- Supervalu Ammonia Response located at 590 E 19th Street (2,100 feet northwest of the subject property) is listed on the SEMS database. This listing is related to a response that occurred to an ammonia release in 2017 and is not an active threat. Based on the information, this listing is not considered a REC to the subject property.
- The Burlington Northern Railroad site located 2150 feet northeast of the subject property is listed on the SEMS database. This listing is related to historical tar pits related to a former coal gasification plant that operated from the 1920s through 1956. This site is Operable Unit 3 of the Commencement Bay Nearshore Tideflats NPL site and is not considered a REC to the subject property due to ongoing remediation and monitoring and no known impacts to the subject property.
- The Tacoma Spur site located at S 24th Street and A street (located 2,175 feet west of the subject property) is listed on the SEMS database. This listing is related to carcinogenic polyaromatic hydrocarbon (cPAH) groundwater contamination discovered during construction of Interstate 705 in 1984. This site is part of the Commencement Bay Nearshore Tideflats NPL site and is not considered a REC based on the proximity and position related to the subject property.

The EPA also publishes the SEMS-ARCHIVE list, which are SEMS sites that have been designated no further interest under the Federal Superfund Program. One SEMS-ARCHIVE site was reported within 0.5 mile of the subject property:

- The American Plating Co Inc site at 2110 East D Street (located 1645 feet northwest of the subject property) is listed on the SEMS-ARCHIVE list. This listing is related to a former electroplating facility that closed in 1986. Ecology assisted the cleanup of this property in 2003 and 2012, and, subsequently, a restrictive covenant was placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site.

Two CORRACTS sites are listed within one mile of the subject property:

- The American Plating Co Inc site at 2110 East D Street (located 1,645 feet northwest of the subject property) is listed on the CORRACTS database. As noted above, Ecology assisted in the cleanup of this property in 2003 and 2012, and, subsequently, a restrictive covenant was placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.
- The University of Washington Tacoma Branch Campus at 1930 C Street (located 3,640 feet northwest of the subject property) is listed on the CORRACTS database. The listing is related to petroleum hydrocarbons, cPAHs, and volatile organic compounds in soil and groundwater below the campus. The site entered an Agreed Order with Ecology in 1997 and is undergoing

remediation and monitoring. Based on the location and proximity to the subject property, this site is not considered a REC to the subject property.

3.1.2.4 RCRIS List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates the subject property is listed as a RCRIS site:

- Spring Air Northwest/Carman Manufacturing Co is listed on the RCRA NonGen database. This appears to be related to environmental investigation on the subject property. Further discussion is presented in Section 4.

One RCRA generator site is listed within 0.25 mile of the subject property:

- The Caraustar site at 808 E 26th Street (located 650 feet south of the subject property) is listed on the RCRA-VSQG database. This very small quantity generator is a paper recycling facility and listed on the database related to generating ignitable waste. There are some violations reported for the site. However, based on the generator status and proximity, this site is not considered a REC to the subject property.

Ten RCRA NonGen sites are listed within 0.25 mile of the subject property. Two were reported within 500 feet of the subject property:

- The Sound Transit Tacoma Link Operations Facility at 802 E 25th Street (adjacent southeast across E 25th Street) is listed on the RCRA NonGen database. The listing appears related to a variety of chemicals used in the repairs and maintenance of the Tacoma Link light rail system. Some violations were reported for this site. However, based on the NonGen status and proximity, this site is not considered a REC to the subject property.
- The Pierce Transit Tacoma Dome parking garage at 609 E 25th Street (adjacent west across East G Street) is listed on the RCRA NonGen database. As noted above, this listing appears related to waste generated or removed from the adjacent property in 1990s prior to redevelopment into the current parking garage. This site is not considered a REC to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRA-TSD site. No RCRIS-TSD sites were identified within 0.5 of the subject property.

The remaining listed sites on the RCRIS list identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to Federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 US Brownfields List

The EPA's US Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a US Brownfields site. One US Brownfields site was identified within 0.5 mile of the subject property:

- The American Plating Co Inc site at 2110 – 2130 East D Street (located 1,645 feet northwest of the subject property) is listed on the US Brownfields database. As noted above, Ecology assisted in the cleanup of this property in 2003 and 2012 and subsequently a restrictive covenant was placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.

3.1.3 EDR Databases

3.1.3.1 Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas List database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site. Two manufactured gas plant sites are listed within one mile of the subject property. Both appear to be referencing the same property:

- The Tacoma Coal Gasification site at E 22nd Street and A Street (located 2,375 feet west of the subject property) is listed twice on the EDR Manufactured Gas List database. As noted above, this site is also known as the Tacoma Spur property and is included in the Commencement Bay Nearshore Tideflats Superfund site. Based on the status within the NPL and proximity, this site is not considered a REC to the subject property.

3.1.3.2 Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station.

Two historical auto stations are listed within 0.125 mile of the subject property:

- Bill's Mobile Service Gas Station at 702 Puyallup Avenue (adjacent north) is listed on the EDR Hist Auto database. The listing indicates the adjacent property was a gas station dating to 1942, 1947, and 1953. Further discussion regarding the neighboring gasoline station is presented in Section 4.
- Standard Stations Inc at 624 Puyallup Avenue (adjacent Tacoma Dome Station parking garage, west across G Street) is listed on the EDR Hist Auto database. The listing indicates this site was a gasoline station in 1965. As noted above, this site had noted excavation and removal of waste in other databases dating to the 1990s. Based on the lack of additional listings and its position cross-gradient from the subject property, this site is not considered a REC to the subject property.

3.1.3.3 Historical Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 mile of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site. There are nine orphan sites listed in the EDR database. The orphan site list and available mapping information were reviewed by Parametrix. None of the orphan sites were found within 0.125 mile from the subject property and none represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-13 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is identified as a potential vapor intrusion site. Further details are presented in Section 4.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps, aerial photographs, topographic maps, city directories, and local agency records.

3.2.1 Sanborn Map Fire Insurance Map Review

A copy of the Certified Sanborn Map Report is included in Appendix C. Maps were available for 1896, 1912, 1950, and 1963. Observations from the Sanborn Maps are listed below.

1896 The subject property is developed with two industrial sites. The western portion is developed as the Pacific Match Company manufacturing warehouse and included a large dipping room. The eastern portion is developed as the Pacific Lounge and Mattress Company furniture manufacturing warehouse and included a workshop, steam dry kiln, showroom, and wood storage. The neighboring property north appears to be used for wood storage. The neighboring property south is the Tacoma Furniture Factory and includes an oil and machinery storage shed.

1912 The subject property is developed as one site part of the Carman Manufacturing Company Furniture and Mattress Factory. A large boiler room is located on the northeastern side of the factory. A woodworking room is at the center of the factory, and a varnishing and a dry kiln are located on the western portion. The site is developed cohesively with the neighboring property north as one facility with the sawmill, dry kiln, wood storage, and varnish and oil house storage on the neighboring property north.

1950 The subject property appears to be developed in a similar configuration. The neighboring property northwest appears to be redeveloped as a gasoline station. An additional property further northwest across East G Street along Puyallup Avenue is also developed as a gasoline station. The adjacent property northeast appears developed as part of the Carman Manufacturing Company sawmill. The neighboring property east across East H Street is a similar Carman furniture factory. The neighboring property west appears as Olympic Ice Company ice factory. The neighboring property south appears to be a freight warehouse.

1963 The subject property appears developed in a similar configuration as 1950. The adjacent property north includes the gas station, parking, and the shipping department for Carman Manufacturing Company. Minimal changes appear on surrounding properties.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs (aerials) of the subject property area were obtained from EDR. Additional aerials, available from the Pierce County GIS mapping program (Pierce County 2020) and the City of Tacoma GIS mapping program (City of Tacoma 2020a), were reviewed. Aerial photographs for the years 1931, 1940, 1945, 1950, 1957, 1968, 1970, 1972-73, 1980, 1985, 1990, 1995, 2002, 2005, 2009, 2015, and 2018 were examined. Copies of the aerial photographs from EDR are included in Appendix D. Observations are listed below.

1931 The subject property appears developed with a large warehouse. A storage yard is visible to the north.

1940-1957 The subject property appears developed with several contiguous warehouses operating as one facility. The surrounding area is similarly developed predominantly industrially. Two gas stations are visible northwest of the subject property.

1968 The subject property appears similar to its current configuration as the separate warehouses appear predominantly consolidated into one structure.

1970-1973 The subject property remains developed in a similar configuration. The gas stations to the northwest are no longer present.

1980-1995 The subject property appears developed as the Spring Air Northwest/Carman Manufacturing facility.

2002-2018 The subject property remains developed with a warehouse. The lot north appears used for vehicle storage. The neighboring property west is redeveloped into a parking garage by 2002.

3.2.3 Historical Topographic Maps

Historical topographic maps of the subject property area were reviewed from the U.S. Geological Survey (USGS). The subject property is located on the Tacoma south 7.5-minute Quadrangle. Maps were available for years 1941, 1961, 1997, 2011, 2014, 2017, and 2020. Observations are listed below.

1941	The subject property appears within the City of Tacoma. A main roadway is present along East G Street and turning along Puyallup Avenue.
1961-2020	The subject property appears developed with a large warehouse.

3.2.4 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.4.1 Tacoma Permit Records

Available historical City of Tacoma permit records were reviewed for the subject property. Copies of the permit records are attached in Appendix F. Below is a summary of the permits with respect to potential environmental significance:

- A 7,000-gallon heating oil tank and boiler were installed in 1960 for Carman Manufacturing Company
- Installation of a maintenance shop in the factory in 1964
- Installation of a paint spray booth in 2002

Several miscellaneous site improvements were summarized in the permit records. Copies are included in Appendix F. Based on the review of the permit records, potential RECs were identified related to the historical permit records.

3.2.4.2 Tacoma Public Library

The Tacoma Public Library Northwest Room has online databases for historical photographs and a historical building index.

- One historical image of the subject property dating to 1927 shows the Carman Manufacturing Company facility along E 25th Street and neighboring properties west.

3.2.4.3 Other Sources

The history of Tacoma furniture manufacturing has been previously documented and includes the history of the subject property (HistoryLink 2018).

- The factory on the subject property was built around 1891 by Joseph L. Carman and operated as Pacific Lounge and Mattress until 1903, when it became Carman Manufacturing Inc.
- Carman Manufacturing expanded into Spring Air Mattress around 1950.
- In the 1990s, after over 100 years of operations at the subject property, Carman/Spring Air moved its main manufacturing plant to Thurston County.

3.2.5 Summary of Historical Information

Based on the historical review, the subject property was developed by 1891 into a match manufacturing and furniture manufacturing company. From around 1900, the subject property was primarily used for furniture manufacturing by the Carman Furniture Manufacturing Company and, later, as Spring Air Mattress. In 1960, a 7,000-gallon heating oil UST and boiler were added to the facility. The site operated as a manufacturing facility through the 1990s. A portion of the warehouse was later used as a paint booth by 2002. RECs related to the historical use of the property remain unresolved.

The surrounding area was predominantly industrial and commercial land uses. The neighboring property north was operated as part of the Carman Manufacturing plant until the 1930s when the western portion of the neighboring property was developed into a gasoline station through approximately 1960. The eastern portion of the neighboring property north remain part of the Carman plant through the 1960s and has largely been a storage lot since that time. The neighboring property south was similarly a furniture manufacturing plant with an oil storage lot south across E 25th Street. The neighboring property west and northwest was operated as an ice manufacturing plant and, later, a grocery store and gasoline station from the 1930s through the 1960s. It was developed into a parking garage in the 1990s.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the building (constructed around 1891), there is potential for asbestos-containing materials to have been used in the construction of the buildings.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Based on the age of the building (constructed around 1891), there is potential LBP to have been used in the construction of the building.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Based on the age of the building, there is some potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment). However, Parametrix did not inspect the building interior for this assessment.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

The subject property is located in the Federal EPA Radon Zone 3. The Zone 3 indoor average radon level predicted as less than 2 pCi/L (pico Curies per liter), reported as a low risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-13, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below. Copies of Ecology records are attached in Appendix F.

4.1 Previous Investigations

Based on regulatory information from Ecology, past records were reviewed for the subject property listed as Spring Air Northwest/Carman Manufacturing company property, which included a Remedial Investigation (RI) work plan completed in 2016.

The RI work plan was completed by ECI Environmental Services. The report indicates the building on the subject property was completed around 1891 and the neighboring property north was developed by at least 1896 for lumber/wood storage, part of a sawmill and engine shop and, later, the gasoline station and a restaurant.

In 1986, a 7,000-gallon UST was reported to Ecology related to the boiler room at the manufacturing plant. The 7,000-gallon UST was identified below the building and was closed in place in 1989 by Don Golden Company. One soil sample was collected during the decommissioning and found total petroleum hydrocarbons (TPH) concentrations at 53.2 mg/kg, below Model Toxics Control Act (MTCA) Method A cleanup levels.

Creative Environmental Technologies Inc (CETI) completed a Phase I ESA and subsequent Phase II ESA of the subject property. Three boreholes were advanced near the former boiler and free product was discovered in two of the boreholes. In 1998, CETI performed additional Phase II ESA work at the subject property and completed 33 boreholes in the boiler area and north of the building, one test pit adjacent to the factory, one temporary monitoring well, and three permanent monitoring wells. Free product was encountered in eight boreholes and groundwater concentrations of diesel up to 41,500 ug/L were identified, and cPAHs were found above MTCA Method B cleanup levels. The subject property was then entered into the Ecology VCP program in 1998. Figure 2 displays the approximate area of the subject property impacted.

CETI completed a Cleanup Action Plan in 1998 for removal of contaminated soil outside the building footprint and using a pump and treat system inside the building. CETI excavated 2,804 tons of diesel-contaminated soil from the adjacent parking lot north and the east side of the subject property building (Figure 2). The excavation was reported within a few feet of the building and contamination remained in place, so a geomembrane was installed between the contaminated soil and clean backfill. In 1999, CETI installed the pump and treat system with placement of six recovery wells. Approximately 100 gallons of free product was recovered by the system from 1999 through 2001. The system was then shut off and annual groundwater monitoring was completed by Sound Environmental Strategies through 2007, showing a relatively stable groundwater plume.

In 2006, a Phase I and Phase II ESA of the Spring Air Facility was conducted by Swift Creek Environmental. The Phase II ESA included placement of one borehole and two monitoring wells/piezometers, and sampling of two of the existing recovery wells. Results from the two new

monitoring wells found concentrations of diesel and oil above MTCA Method A cleanup levels. Metals were also detected in samples. As part of the RI workplan, ECI Environmental Services (2016) indicated they would sample the wells below the Spring Air property and try to determine the extent of the groundwater contamination. No new boreholes or monitoring wells were proposed. As noted in Section 6 below, the Tacoma-Pierce County Health Department has no records regarding the subject property since the 2016 RI workplan, which is indicative that the investigation may not have yet been completed.

Based on the review of the Ecology files, the subject property is impacted with diesel-range petroleum hydrocarbons related to a release from a previously closed 7,000-gallon heating oil UST (Figure 2). Remediation of contaminated soil below the subject property and adjacent property north was completed; however, the extent of groundwater contamination below the subject property and impact to the neighboring property is unknown. Additionally, there may be areas remaining of free-phase petroleum hydrocarbons that were not addressed by previous remediation. This represents a REC for the subject property. Vapor intrusion assessments were not previously completed related to the release. The unresolved plume also represents a potential vapor intrusion risk to the subject property and adjacent property.

4.2 Adjacent Properties File Review

Several nearby properties were listed on environmental databases, as described in Section 3. In general, sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. However, further information was obtained for one property immediately adjacent to the north.

Ecology files for the Former Texaco property at 702 Puyallup Avenue were reviewed and include:

- 2006 Phase II ESA completed by Environmental Management Services, LLC
- 2017 Remedial Investigation Report completed by ECI Environmental Services
- 2017 Ecology Voluntary Cleanup Program (VCP) agreement and Application
- 2018 Ecology VCP acceptance Letter
- 2018 Further Action letter from Ecology

The information in the available files indicate three USTs were discovered and subsequently removed from the neighboring property in 1998. Approximately 43 tons of petroleum contaminated soil (PCS) was also excavated and disposed off-site. Confirmation soil samples from the excavation were all reported below laboratory detection levels.

In 2006, a Phase II ESA was completed around the historical gas station and gasoline was found above MTCA Method A cleanup levels in soil, and diesel, oil, lead, and chromium were found above MTCA Method A cleanup levels in groundwater. Based on the results of the Phase II ESA, Ecology indicated that further remedial actions were necessary at the site.

In 2017, a Remedial Investigation of the neighboring property was completed by drilling four boreholes and four monitoring wells. Sixteen soil samples and four groundwater samples were submitted for analysis.

The soil results showed levels of gasoline in one sample above MTCA Method A cleanup levels at 1,500 mg/kg, ethylbenzene at 11 mg/kg, and xylenes at 14 mg/kg. Additional soil results showed diesel

and oil concentrations ranging from 240 up to 1,100 mg/kg, below MTCA Method A cleanup levels. Concentrations of arsenic, lead, and chromium were reported below MTCA Method A cleanup levels.

The groundwater results showed all four monitoring wells above MTCA Method A cleanup levels for total arsenic and one well above MTCA Method A cleanup levels for total chromium. The samples were reported below MTCA Method A cleanup levels for dissolved lead, but above MTCA Method A cleanup levels for total lead. There were no detections of gasoline or oil in the four groundwater samples. Low concentrations of diesel were detected in two of the samples at 78 to 120 ug/L.

Following completion of the Remedial Investigation, the site was entered into the VCP Program, and an opinion was requested from Ecology. Ecology indicated further remedial actions were necessary to achieve cleanup status at the neighboring property.

Based on the available Ecology files, the neighboring property north has unresolved RECs related to the historical use of the property. It does not appear soil or groundwater migration pathways from the neighboring property exist towards the subject property due to the downgradient position relative to the subject property and the reported delineation of the plume; however, vapor migration pathways from the neighboring property have not been fully investigated. Therefore, the release on the neighboring property north represents a REC to the subject property.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on November 3, 2020. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site examination are included in Appendix E.

5.1 Subject Property

The subject property is developed with a large two- to three-story warehouse. The building has a wood and corrugated metal exterior. It is currently used as a U-Haul rental facility with the main offices on the southeast corner of the building.

Pole-mounted transformers operated by Tacoma Public Utilities were observed along E 25th Street. Two monitoring wells were observed on the northeast side of the building. Several 55-gallon steel drums with non-hazardous waste labels were observed north of the building. A potential dry well was observed south of the building likely related to historical roof downspouts.

Based on the observations and the identified contamination from the file review, an ongoing historical release of diesel-range TPH is present at the subject property.

5.2 Adjacent Properties

The neighboring property north is predominantly a parking lot and drive-thru espresso stand. Environmental boreholes and monitoring wells were observed on the northwest portion of the adjacent property with environmental drums stored just north of the building on the subject property. These observations suggest an ongoing release affecting the neighboring property north of the subject property and potential RECs related to the neighboring site.

The neighboring property west is developed as a parking garage. The neighboring property south is utilized by Sound Transit. The neighboring properties to the east are warehouses.

6. INTERVIEWS

An interview was not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-13.

A user questionnaire was submitted to Sound Transit to assist in identifying potential RECs affecting the site and identification of background information on the subject property. A copy of the user questionnaire completed by Sound Transit is attached in Appendix A.

Parametrix conducted an interview with Rob Olsen, Environmental Health Specialist of the Tacoma-Pierce County Health Department Environmental Health – Contaminated Properties division, on February 4, 2021 (TPCHD 2021). Mr. Olsen indicated that ECI Environmental is the consultant on record for the cleanup of the property and that the TPCHD has no record of files or cleanup actions for the site since the 2016 RI workplan.

7. CONCLUSIONS

Parametrix conducted a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E 1527-13. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report. Based on the findings of this investigation, Parametrix reached the following conclusions:

- The subject property is located at 725 E 25th Street in Tacoma, Washington, on Pierce County Parcel Identification number 2075270010 (Figure 1). The subject property is currently owned by Amerco Real Estate Company and operated as a U-Haul rental facility. The subject property is developed with a large two- to three-story warehouse that contains the U-Haul rental offices on the southeast corner of the building. Monitoring wells and 55-gallon non-hazardous waste storage drums were observed on or surrounding the subject property, indicative of an ongoing investigation of historical releases. Monitoring wells and borehole patches were also observed on the adjacent property north.
- The subject property was first developed industrially in 1891 and operated as a furniture manufacturing warehouse through the 1990s. The furniture manufacturing included oiling and varnishing of furniture. In 1960, a heating oil UST was installed on the property and operated until decommissioning in 1989. The neighboring property north operated as a gasoline station from 1939 through 1961.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property, except for the following:

Recognized Environmental Conditions

The subject property is listed on the Ecology CSCSL database, Ecology UST database, Ecology VCP database, ALLSITES database, and RCRA NonGen database. The listings are related to a historical unresolved petroleum release impacting soil and groundwater below the subject property. The petroleum release is from the historical heating oil UST, which leaked free product impacting soil and groundwater below the subject property and neighboring property to the north. Free product recovery was completed, but residual groundwater contamination remains below the subject property. Vapor intrusion impacts related to the release are suspected. Therefore, interim cleanup actions have been performed on the subject property, and soil impacts to the neighboring property to the north have been addressed; however, the nature and extent of the release and cleanup have not been completed.

The adjacent property to the north has unresolved RECs related to a release from a historical gasoline station. Soil and groundwater impacts to the subject property are not suspected related to the neighboring site; however, due to the proximity to the subject property, there is potential for vapor migration to impact the subject property.

Data Gaps

An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

PROPERTY HISTORY GUARANTEE

Total Liability Limited to	Fee	Tax
$50,000.00	$350.00	$35.35

Date of Report: February 24, 2021 at 08:00 AM

A. Assured: Central Puget Sound Regional Transit Authority, a regional transit authority

B. The land described in this Guarantee is described as follows:

Lots 1 to 12, Block 7527; and Lots 1 to 12, Block 7428, Tacoma Land Company's First Addition to Tacoma, according to plat filed for record on July 7, 1884, in the office of the County Auditor, in Pierce County, Washington;

Together with all of the alley lying between said Blocks, vacated by Ordinance No. 19338 of the City of Tacoma, recorded May 3, 1971 under Recording No. 2389669, in Pierce County, Washington.

C. At your request, Chicago Title Insurance Company, a Florida corporation has searched the public records of Pierce, Washington, which by law impart constructive notice, for the documents shown below (hereinafter called "the Instruments"):

Deeds, Contracts, Leases

D. At your request, the period of time searched is as follows:

Beginning date: February 24, 1971 at 08:00 AM
Ending date: March 24, 2021 at 08:00 AM

E. The following matters are excluded from the search provided by this guarantee:

1. Unpatented mining claims, and patents
2. Water rights, or claims thereof
3. Instruments, proceedings or other matters which do not specifically describe said land.

This Guarantee is restricted to the use of the Assured. This Guarantee is not a Commitment nor an obligation by the Company to issue any Policy or Policies of Title Insurance insuring said land, and is not to be used as a basis for closing any transaction affecting title to said property.

F. The Instruments as defined in Paragraph C recorded during the period of time searched are:

GENERAL EXCEPTIONS

H. Reservations and exceptions in United States Patents or in Acts authorizing the issuance thereof.

SPECIAL EXCEPTIONS

1. Statutory Warranty Deed:

Grantor: Carman Manufacturing Company, a Washington corporation
Grantee: SPI Properties LLC, a Washington Limited Liability Company
Recorded: November 4, 1998
Recording No.: 9811040541

2. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by the document:

Entitled: Memorandum of Lease
Lessor: SPI Properties LLC
Lessee: Carman Manufacturing Company
Recording Date: November 12, 1998
Recording No.: 9811120562

Assignment and Assumption of Lease:

Assignor: SPI Properties, LLC
Assignee: Han Joe Ro, LLC
Recording Date: January 15, 1999
Recording No.: 9901150670

3. Statutory Warranty Deed:

Grantor: SPI Properties LLC, a Washington Limited Liability Company
Grantee: Han Joe Ro, LLC, a Washington Limited Liability Company
Recorded: January 15, 1999
Recording No.: 9901150666

4. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by the document:

Entitled: Memorandum of Lease
Lessor: Han Joe Ro, LLC
Lessee: Chami Design, Inc.
Recording Date: January 15, 1999
Recording No.: 9901150675

5. Statutory Warranty Deed:

Grantor: Han Joe Ro, LLC, a Washington Limited Liability Company
Grantee: Landmark Tacoma I LLC, a Washington limited liability company, as to an undivided 50% interest; and Landmark Tacoma II LLC, a Washington limited liability company, as to an undivided 50% interest
Recorded: October 4, 2006
Recording No.: 200610040888

(continued)

6. Statutory Warranty Deed:

Grantor: Landmark Tacoma I LLC, a Washington limited liability company, as to an undivided 50% interest; and Landmark Tacoma II LLC, a Washington limited liability company, as to an undivided 50% interest
Grantee: Amerco Real EState Company, a Nevada corporation
Recorded: April 19, 2018
Recording No.: 201804190151

This map/plat is being furnished as an aid in locating the herein described land in relation to adjoining streets, natural boundaries and other land, and is not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

ASTM 1527-13 USER QUESTIONS

ASTM 1527-13 includes a user questionnaire that must be completed by the user in order to qualify for Landowner Liability Protections (LLPs) under CERCLA. The following questions are to be completed by the user or representatives of the user.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
   _No_____
2. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? _ No
   _____
3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? __ No
   _____
4. For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? __ No
   _____
5. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? _I am not aware of the purchase price_____
6. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? __ No
   _____

   For example, as user,

   (a) do you know the past uses of the property? _ No
   _____

   (b) do you know of specific chemicals that are present or once were present at the property? _ No
   _____

   (c) do you know of spills or other chemical releases that have taken place at the property? _ No
   _____

   (d) do you know of any environmental cleanups that have taken place at the property? _ No
   _____

7. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination on the property? __ No
   _____

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TACOMA SPUR Site ID: 1001025 EPA Id: WAD980835789	24TH S AND EAST A (I	W 1/4 - 1/2 (0.411 mi.)	138	629

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 07/13/2020 has revealed that there are 84 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, has revealed that there are 4 WA SWF/LF sites within approximately 0.5 miles of the target property.

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 05/12/2020 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 07/13/2020 has revealed that there

is 1 WA BROWNFIELDS site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 06/01/2020 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 07/13/2020 has revealed that there are 19 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within

approximately 1 mile of the target property.

TACOMA COAL GASIFICA	E 22ND AND A STS	WNW 1/2 - 1 (0.508 mi.)	AS185	1094

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Number:	8950001761
Parcel size:	1.72
Latitude:	47.24255
Longitude:	-122.4305531
HCM Label:	Address Matching-House Number
Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Approximately half an acre was turned into a linear park. The remaining portion of the property is pending development of a boat house. Thea-Foss Development Authority is currently working with a citizen's group to raise the funds to build the boathouse. Once built, it will promote canoeing and kayaking on Commencement Bay. Updated 10-22-2015: FWDA will begin public planning for the conversion of the entire site to a park late this fall. Pierce Assessor records shows the property is leased to BIL-JAX Scaffolding business.

Property Description:	Prior to 1955, the site was used for boat building. From 1955 to 1986 it was a plating factory. They specialized in polished copper, nickel and bright chrome finishes. The facility was operation from 1976 to 1986 when operations ceased and the business filed for bankruptcy. The City of Tacoma acquired the property in the late 1980s. In 2002 the buildings on the property was demolished and removed from the site. The site sat vacant ever since.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

SUPERVALU INC (Continued) **1004793913**

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

PICKS COVE MARINA (Continued) **1001485972**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ARROW TRANSPORTATION COMPANY TACOMA TERMINAL (Continued) **1007081390**

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated

BROWN & HALEY INC FACTORY SITE TACOMA (Continued) **1004613541**

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a

HOOD ST RESERVOIR (Continued) **1001600510**

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
